Angel Flight West’s network of volunteer pilots provide free medical transportation to people in need.

Transportation challenges create one of the most daunting barriers to healthcare—a barrier second only to the cost. As a volunteer-led, nonprofit organization, Angel Flight West's (AFW) volunteer pilots provide free medical transportation to help passengers reach their health care across 12 Western states, including Oregon.

AFW has spent four decades—and provided more than 96,500 flights—creating pathways to healthcare across the Western United States, arranging donated flights to people in need. On the ground, Earth Angels drive passengers from the airport to the medical facility, also free of cost.

Though we’re best known for linking passengers to valuable medical resources, we also provide transportation for other humanitarian purposes, such as individuals and families escaping domestic violence, disaster relief, therapeutic programs for veterans, and children’s specialty camps.

In 2022 alone, 30 volunteers based in Oregon flew 137 missions to help passengers reach their far-off care.

There’s never any charge for an angel flight, and patients can fly with us as many times as they need to reach far-off, non-emergency medical treatment.

After Jenna’s diagnosis of state 4 colon cancer last year, AFW's volunteer pilots have helped her bridge the daunting transportation gap, free of cost. To date, Jenna has had 29 angel flights to travel to Seattle, WA for care and back home. “They've been the hugest gift,” Jenna said. “To be able to live where I live and still know I can go to the best places for treatment? Well, the world just opens up.”

Requesting a Flight
Flights may be requested by individuals and by healthcare professionals. Please visit our website to learn more about requirements: https://www.angelflightwest.org/need-a-flight/. You can call us directly to learn more about flying with Angel Flight West at (310) 390-2958 or email us at info@angelflightwest.org.
Executive Director’s Corner

Hello Everyone,

I hope you are doing well in this heat. It is very important to make sure that you do not get heat exhaustion or heat stroke. If you are having an issue be sure to call 211 and they can help.

Be safe, you are not alone.

Sherry Stock, ABD/PhD, CBIST
BIAOR Executive Director - NeuroGerontologist

Imagine What Your Gift Can Do.

The most important achievements often start where they are least expected. That’s why BIAOR is the perfect place to give. It allows your money to go where it’s needed most, when it’s needed most. BIAOR provides information about brain injury, resources and services, awareness and prevention education, advocacy, support groups, trainings and conferences and meetings throughout the state for professionals, survivors and family members. Your gift makes a difference at BIAOR.

BIAOR by the Numbers

BIAOR’s Fiscal Year runs from July 1-June 30.

What does your membership dues pay for?
Each year we provide:

Information & Referral
7200 calls, 32,000 emails
1520 packets mailed, 2550 DVDs mailed
1.2 million website visitors

Legislative & Personal Advocacy

Support Services
85 Support Groups, Peer Mentoring and Support, Donations, Emergency Support

Awareness and Prevention
65 Awareness and Prevention Events

Education
3 day Annual Multi-State Conference
370 + Trainings/Conferences/Education/Classes
The Headliner, reaching 16,000 quarterly

Referrals to current Research Projects

We can’t do this alone, please send in your membership dues today or donations.
See page 22 for a membership form
ARE YOU A MEMBER?

The Brain Injury Alliance of Oregon relies on your membership dues and donations to operate our special projects and to assist families and survivors. Many of you who receive this newsletter are not yet members of BIAOR. If you have not yet joined, we urge you to do so. It is important that people with brain injuries, their families and the professionals in the field all work together to develop and keep updated on appropriate services. Professionals: become a member of our Neuro-Resource Referral Service. Dues notices have been sent. Please remember that we cannot do this without your help. Your membership is vitally important when we are talking to our legislators. For further information, please call 1-800-544-5243 or email biaor@biaoregon.org. See page 22 to sign up.
Chronic Pain

Chronic pain has many definitions based on the length of time the pain has persisted. In most definitions, chronic pain persists longer than 6 months.

- Chronic pain is a common complication of TBI.
- Approximately 81% of soldiers returning from OIF/OEF reported symptoms consistent with chronic pain.
- The most common chronic pain locations: Back (58%) Head (55%).

Chronic pain can co-exist with other complications such as PTSD. However, a recent study found that chronic pain is independent of psychological disorders such as PTSD and depression. Chronic pain is common even among patients with apparently minor injuries to the brain.

Substance Abuse

**Risk factor for injury**

- 18% to 66% of patients with mTBI have history of alcohol abuse.
- ½ to ⅔ of patients with mTBI test positive for alcohol or illicit drugs at time of admission.

**Obstacle to rehabilitation**

- Diminished recovery from TBI
- Diminished benefit from rehabilitation
- Increased risk of seizures
- High rates of re-injury

**Increased risk**

- Pre-existing substance abuse diagnosis at time of injury is predictive of heavy drinking following injury.

---

**Trial Guides** was established in 2004 as a legal media company that helps civil plaintiff's lawyers win. We provide professional educational materials and continuing education seminars, with a wide variety of books and media on the practice of law. Our print, digital, audio, and video titles are known for their accessibility, clarity, and unique focus on the practical aspects of legal practice, with proven tactics and strategy from many of the top lawyers and legal consultants from around the country.

In addition to the nation’s leading trial lawyers, Trial Guides products are used by the U.S. Department of Justice, the ACLU, the Global 100 (largest law firms in the world), the American Association for Justice, the Southern Poverty Law Center, and multiple law schools including Stetson’s LL.M. degree in Advocacy (ranked #1 in U.S. News & World Report for Advocacy 19 times).

Trial Guides offers products for lawyers, doctors, paralegals, students, and parties impacted by the legal system. Trial Guides also creates products for members of the public in the areas of insurance, product safety, and business practices.

Chali's Group Home

Chali’s Group Home is a 24-hour residential care facility in NE Portland, Oregon. Nestled in the heart of an urban setting, the facility provides a comfortable and supportive environment for adults in need of ongoing care. The facility is well-appointed and well-maintained, providing residents with all the amenities they need to live a fulfilling and independent life.

At Chali's Group Home, residents are cared for by a compassionate and attentive staff. These trained professionals are dedicated to ensuring that each resident receives the highest level of care and support possible. Whether it’s helping with medication management, meal preparation, or simply providing a listening ear, the staff is always available to lend a helping hand.

The facility is designed to foster a sense of community and belonging among residents. Group activities and outings are organized regularly, allowing residents to socialize and connect with one another. At Chali's Group Home, residents can feel safe, supported, and cared for, knowing that they are part of a community that values their well-being above all else.

Understanding Brain Injury and Managing Behavioral Challenges Following Brain Injury and ACBIS International Certification Training

The Academy of Certified Brain Injury Specialists (ACBIS) offers a voluntary international certification program for both entry-level staff and experienced professionals working in brain injury services. ACBIS provides staff and professionals the opportunity to learn important information about brain injury, to demonstrate their learning in a written examination, and to earn a nationally recognized credential. Certification is not restricted to any one profession or discipline. Rather, it is intended for anyone who delivers services specific to brain injury.

Certification is based on a comprehensive training textbook that covers the following topics:
- Health and medical management
- TBI and diagnostic imaging
- Medical, physical, cognitive, neurobehavioral, and psychosocial consequences of injury
- TBI in pediatrics and adolescents, as well as aging with a brain injury
- Concussions and mTBI, as well as disorders of consciousness
- Rehabilitation philosophy, outcome measurement, and care management
- Effect of injuries on families
- Cultural, gender, and sexuality issues
- Military populations
- Neuropsychology
- Participation and return to work

The Brain Injury Association of America, through its cooperative agreement with Wolters Kluwer Health/Lippincott Williams and Wilkins (LWW), is pleased to provide, to each new ACBIS certificant who has applied under the fee structure established December 1, 2008, a one-year subscription to the Journal of Head Trauma Rehabilitation. This reflects a commitment to ensuring that Certified Brain Injury Specialists have access to the latest brain injury research, treatment and practice information.

The Brain Injury Alliance of Oregon is offering a training program geared toward preparing for the CBIS examination. This training will be delivered in a two day workshop. Students must attend the entire session. The workshop will include study materials and interactive workshop with Sherry Stock, ABD/PhD, Certified Brain Injury Specialist Trainer. The National Online Examination will be given at the end of the day, from 4:00-6:00 pm. 

Cost of participation:

$1500 includes training, book, exam fee and one year BIAOR professional-level member pay online now.
$1050 for Participation CBIS training only (including book $550 - no Exam ) pay online now.
Additional Costs of Trainings may apply: Travel costs for trainer outside the greater Portland area may apply covering per diem and travel costs. Contact Sherry Stock at 503-740-3155 or sherry@biaoregon.org for further information

Currently all trainings are by Zoom—call for dates

Join us for this comprehensive training, and gain your international certification in Brain Injury, with support through BIAOR.

Applicants must complete and submit the required eligibility paperwork four weeks prior to the training class in order to secure enrollment to the class. Required paperwork includes the following: ACBIS Application Form, Employment Verification and your current Resume. To proceed with the required paperwork forms see the Application Process or contact Sherry Stock, 503-740-3155 sherry@biaoregon.org
All new paid applicants will receive a one-year subscription to the *Journal of Head Trauma Rehabilitation*. This reflects a commitment to ensuring that Certified Brain Injury Specialists have access to the latest brain injury research, treatment and practice information.

**Eligibility Requirements (Please read carefully - once payment is received there are no refunds)**

1. Applicants must have had 500 hours of currently verifiable direct contact experience with an individual or individuals with brain injury.
2. Experience can be paid employment and/or academic internship.
3. The qualifying experience must have included formal supervision or have been conducted while the applicant operated under a professional license. Volunteer work does not qualify.
4. Applicants must have a high school diploma or equivalent.
5. It is up to the individual to determine that they have met the above requirements when they register. Once payment has been made there are no refunds.

Currently all trainings are by Zoom—call for dates

Official ACBIS training is provided by Sherry Stock, a Certified Brain Injury Specialist Trainer (CBIST). *The Essential Brain Injury Guide* will be mailed to you upon receipt of your payment in full. Training materials will be handed out in the class.

Bring a laptop computer that has wireless capabilities with you for the online exam. If you do not have one please contact Sherry at BIAOR, 503-740-3155  sherry@biaoregon.org.

**Certification Examination**

Candidates must pass (80% or higher) on the certification examination. The exam can only be taken after all forms and fees have been submitted, processed and an approval email has been received. Applicants who have completed the training or self-study and are ready to take the examination must read the instructions further down this page. The exam can also be offered to individuals as long as a CBIST or other approved individual proctors the exam. Please note: The certification fee does not include any expenses associated with proctoring an individually administered exam. If hiring an outside proctor is necessary, the applicant will be responsible for these costs.

**Notification of Exam Score:** Candidates will receive immediate notification via email of their exam score upon completing the online examination. Information about individual candidates and examination results will not be released to any party other than candidates or group administrators. Candidates’ scores are NOT released to anyone, including the candidate, by telephone.

**Retakes:** Candidates who do not pass the examination on the first administration may take one retest within one year of the initial application date at no additional charge. An applicant who does not pass after two attempts is welcome to reapply when ready.

**Application Process**

The process described on the BIAOR website and is intended for those who are pursuing CBIS Certification as a part of a group with BIAOR, please contact your Group Administrator, Sherry Stock, 503-740-3155 sherry@biaoregon.org, for further instructions. Once payment is received there are no refunds. Please read requirements above carefully.

Payment must be made to BIAOR at least 3 weeks in advance of the class. The process for submitting an individual CBIS Application can be confusing, please follow these directions provided at [https://www.biaoregon.org/services/training-education/cbis-training/](https://www.biaoregon.org/services/training-education/cbis-training/)
This month’s success story is dedicated to our client Kevin who suffered a Traumatic Brain Injury over a year ago. Kevin has been working diligently in our intensive day program with our Physical, Occupational, and Speech therapists. Kevin’s goal was to return to his favorite hobby: fishing. He states this hobby has provided immense joy to his life since childhood. Please enjoy Kevin’s story:

With the support and assistance of his Physical Therapist Sage and Occupational Therapist Deb, Kevin was able to go on his first fishing expedition since his injury. He was even able to bring his longtime fishing buddy to experience the moment together. Kevin reported he was able to cast the fishing line, but most importantly he caught a fish! Furthermore, he cleaned and helped prepare the fish for dinner with his spouse, skills he has attained through hard work and dedication to his therapies. Following the trip, Kevin enthusiastically stated, “It was pretty awesome. My longtime friend and fishing buddy came to join us. It was enjoyable. Nice to get out and get fishing again.”

Q&A:

How long have you been fishing for? “Since I was 5 years old with my dad.”

How long have you and your fishing buddy been fishing together? “Over 30 years.”

When is the last time you went fishing? “Injury was over a year ago, have not fished since.”

Sage, PT, DPT: “From day one, Kevin made his fishing and hunting goals clear (he even has a tattoo dedicated to fishing!). Since then, PT, OT, and Speech Therapy have been working together to find ways to work his passions into our sessions. When Amy M, COTA suggested taking him fishing, we got the entire team involved in the planning and preparation to make it happen. He caught a rainbow trout in the first 10 minutes. His smile says it all!”

Deb, OTD, OTR/L: “This experience perfectly demonstrates why I chose to be an Occupational Therapist with Progressive Rehab Associates & Rehab Without Walls. We can insert ourselves into their world and facilitate their safe re-engagement in meaningful occupations. Whether it is returning to a loved activity or learning a new one... we face the challenges together.”

Our clinicians at Rehab Without Walls are dedicated to returning our clients to their prior hobbies, occupations, and other activities that bring joy and fulfillment to their lives. We are grateful to have patients like Kevin who work hard and who allow our clinicians to take the necessary steps to attain next level progress!

RehabWithoutWalls.com/Portland
More in Common Than You Think

Acquired Brain Injury (ABI)
An injury to the brain that is not hereditary, congenital, degenerative, or induced by birth trauma. The injury results in a change in neuronal activity, which affects the physical integrity, the metabolic activity, or functional ability of nerve cells in the brain.

There are two types of brain injury

1. **Non-traumatic Brain Injury**
   Often referred to as an acquired brain injury, non-traumatic brain injuries cause damage to the brain by internal factors, such as a lack of oxygen, exposure to toxins, pressure from a tumor, etc.

2. **Traumatic Brain Injury**
   An alteration in brain function, or other evidence of brain pathology, caused by an external force. There are two primary mechanisms of TBI; those involving impact to the head (Traumatic Impact), and those involving inertial forces which affect the brain (Traumatic Inertial).

Causes of Brain Injury

- Stroke
- Anoxic/Hypoxic
- Poison
- Virus
- Tumor
- Fall
- Struck by Object
- Sports
- IED

Acquired Brain Injury

- **Focal** or **Diffuse**

  - **Focal**
    - **Traumatic Impact**
      - Contact Injury
        - Head struck by or against an object
    - **Traumatic Inertial**
      - Non-Contact Injury
        - Brain moves within skull
    - **Non-Traumatic**
      - Internal Insult

  - **Diffuse**

    - **Primary**
      - **Focal**
      - **Diffuse**
    - **Primarily Diffuse**
      - (Multifocal)
    - **Focal**
      - **Diffuse**

Primary Injury Mechanism

- **Closed**
  - (Non-Penetrating)
- **Open**
  - (Penetrating)
  - Skull Fracture
  - Meninges Breach

Injury Classification

- **Focal** or **Diffuse**

  - **Focal**
  - **Diffuse**

Injury Pathology Physiology

- **Focal** or **Diffuse**

  - **Focal**
    - Brain Contusions
    - Brain Lacerations
    - Intracerebral-Hemorrhage
    - Diffuse Axonal Injury
  - **Diffuse**
    - Epidural Hematomas
    - Subdural Hematomas
    - Intracerebral-Hemorrhage
    - Infections

Injury Causes

- **Focal**
  - Brain Contusions
  - Brain Lacerations
  - Intracerebral-Hemorrhage
  - Diffuse Axonal Injury
- **Diffuse**
  - Epidural Hematomas
  - Subdural Hematomas
  - Intracerebral-Hemorrhage
  - Infections

Parent's Guide: the early days after your child's brain injury

Child rearing brings challenges to all parents, and for parents of a child with a brain injury, the challenges can be magnified.

There are many issues, such as striking a balance between protecting your child from harm, while encouraging self-reliance and independence. It may not be clear, in the early stages, what problems a traumatic brain injury has caused, and it can be difficult to predict how much a child will recover, and how fast.

It is easy to focus on the differences - to feel that the young people with a brain injury, and the family, are different from other young people and families. But in general, most parents face a very similar range of challenges. Aim to focus on these similarities and claim your place, and your child’s place, as part of your local community.

At times the emotional challenges can seem overwhelming. Grief, in some shape or form, may always be there. Parents can feel they’ve lost their privacy and sense of control - everyone else has ‘good advice’ and knows best. You may feel isolated and ‘different’ from other families, or that there is no one there to help.

But many parents also say that this life-changing event has also helped them realize what’s really important and value what they do have. Many families also discover they’re not alone—many find that linking up with others in a similar situation provides great support.

Alongside the difficulties, lots of good things happen, and families need to recognize and celebrate these. By and large, families with a child with a brain injury get on with life very competently.

**Will my child be okay?**

This is the most important question for parents in the early days after a brain injury—whether it was either accident or serious illness. You probably won’t take in much of the information you are told at this stage so get people to write things down for you.

Your child may be in a coma—not opening his/her eyes or responding in any way. Coma may last for minutes, hours, days or longer. As your child comes out of coma, he/she will move into a ‘twilight’ zone-awake but confused, disoriented, maybe agitated, and not making sense. This is known as post-traumatic amnesia, or PTA.

In PTA, your child may remember things from the past, but won’t remember things happening now, from minute to minute. Ordinary things may look strange or different, or your child may imagine things that are not there—an experience that can be frightening or confusing. Later on, your child will remember little or nothing of this time, or may have a sense of it as no more than a blurred dream.

PTA may last for minutes, days, weeks or months. The length of time in PTA provides a reasonable basis for predicting how well your child will recover. The depth of coma and how long it lasts provide another indicator.

Talk to the staff on the ward—doctors, nurses, therapy staff, and be ready for answers to change and become clearer over time.

**Things you can do**

The most important thing for your child is feeling held, loved and supported by family and friends—even while in a coma. Always talk and behave as
if your child is conscious—we simply do not know whether people at this stage can hear or understand anything of what is going on.

During PTA your child will be less able to deal with the amount of noise and activity around, and might easily become more agitated or restless. Try to pace interactions and inputs, so things happen at a quiet pace and only one thing at a time.

Bring in photos, favorite blanket and favorite things to create a familiar environment. Help the staff to get to know your child—his/her interests, personality, habits, quirks and talents. You may be able to do some of the day-to-day routine care for your child, if you wish to. Talk to the nursing staff about this.

As the days go past, keep a book to record what's happening. A book of this nature can be reassuring to a young person who realizes, some time later, that they have 'lost' and forgotten some days or weeks of their life.

**Look after yourself**

You will need all your strength to get through this difficult period. Make sure you look after yourself while your child is in hospital (and afterwards). Make chairs into a bed to get some sleep and keep your energy up with meals at the cafeteria. If you want some quiet time, go to the hospital chapel. Accept offers of help from relatives and friends, so you can spend more time with your child and your family.

Pacing yourself is still important when your child comes home from hospital. This can be a time of major readjustment for parents. Quite apart from the physical demands of caring, changes to your child from the brain injury may suddenly become distressingly clear. Being prepared for this can help you to cope with it and continue the process of readjustment.

**Should my child be assessed?**

If you are concerned about difficulties your child is having with, for example, learning, memory, speaking, balance, vision, or handwriting, such problems should always be thoroughly assessed—whether or not your child is known to have a brain injury. Careful and thorough assessment of the traumatic brain injury or other brain disorder is vital to find the best way to help your child—whatever the cause or the diagnosis.

**In the months ahead**

The long-term effects of a brain injury may not be evident for some time. Some may show up only years down the track, when the child is challenged to learn increasingly complex skills and deal with more complex situations. Any of the following changes suggest the need for a thorough assessment to determine how best to help the young person:

- Difficulty with new school work or activities
- Problems in concentrating and remembering instructions
- Slowness in thinking about new things
- Less ability to join in familiar games and activities
- Difficulties understanding what's said or following a conversation
- Decreased ability to re-tell the day's events or find the right word
- Inappropriate sexual discussions or activities.

**Talking to doctors & other professionals**

If you are concerned about any of these symptoms in your child, or if there is any question of a possible brain injury, tell your doctor of your concerns. The doctor will normally examine your child and may make a referral to a specialist doctor such as a neurologist, rehabilitation specialist or pediatrician. Other specialists who may be involved in assessment include a neuropsychologist, speech pathologist, physiotherapist and/or occupational therapist.

If possible, provide the doctor or specialist with the following information:

- When your child was hurt, injured or ill, and what happened
- What was done in the Emergency Department
- The name of any doctor who treated your child
- The changes you've seen in the child
- Problems your child is having in school, with friends or at home - you may need to contact teachers and get feedback from friends
- Examples of how your child seems different now
- What you do to help your child.

Almost half of people with concussion still show symptoms of brain injury six months later
by University of Cambridge

Even mild concussion can cause long-lasting effects to the brain, according to researchers at the University of Cambridge. Using data from a Europe-wide study, the team has shown that for almost a half of all people who receive a knock to the head, there are changes in how regions of the brain communicate with each other, potentially causing long term symptoms such as fatigue and cognitive impairment.

Mild traumatic brain injury—concussion—results from a blow or jolt to the head. It can occur as a result of a fall, a sports injury or from a cycling accident or car crash, for example. But despite being labeled ‘mild,’ it is commonly linked with persistent symptoms and incomplete recovery. Such symptoms include depression, cognitive impairment, headaches, and fatigue.

While some clinicians in recent studies predict that nine out of 10 individuals who experience concussion will have a full recovery after six months, evidence is emerging that only a half achieve a full recovery. This means that a significant proportion of patients may not receive adequate post-injury care.

Predicting which patients will have a fast recovery and who will take longer to recover is challenging, however. At present, patients with suspected concussion will typically receive a brain scan—either a CT scan or an MRI scan, both of which look for structural problems, such as inflammation or bruising—yet even if these scans show no obvious structural damage, a patient’s symptoms may still persist.

Dr. Emmanuel Stamatakis from the Department of Clinical Neurosciences and Division of Anesthesia at the University of Cambridge said, “Worldwide, we’re seeing an increase in the number of cases of mild traumatic brain injury, particularly from falls in our aging population and rising numbers of road traffic collisions in low- and middle-income countries.”

“At present, we have no clear way of working out which of these patients will have a speedy recovery and which will take longer, and the combination of over-optimistic and imprecise prognoses means that some patients risk not receiving adequate care for their symptoms.”

Dr. Stamatakis and colleagues studied fMRI brain scans—that is, functional MRI scans, which look at how different areas of the brain coordinate with each other—taken from 108 patients with mild traumatic brain injury and compared them with scans from 76 healthy volunteers. Patients were also assessed for ongoing symptoms.

The patients and volunteers had been recruited to CENTER-TBI, a large European research project which aims to improve the care for patients with traumatic brain injury, co-chaired by Professor David Menon (head of the division of anesthesia). In results published in Brain, the team found that just under half (45%) were still showing symptoms resulting from their brain injury, with the most common being fatigue, poor concentration and headaches.

The researchers found that these patients had abnormalities in a region of the brain known as the thalamus, which integrates all sensory information and relays this information around the brain. Counter-intuitively, concussion was associated with increased connectivity between the thalamus and the rest of the brain—in other words, the thalamus was trying to communicate more as a result of the injury—and the greater this connectivity, the poorer the prognosis for the patient.

Rebecca Woodrow, a Ph.D. student in the Department of Clinical Neuroscience and Hughes Hall, Cambridge, said, “Despite there being no obvious structural damage to the brain in routine scans, we saw clear evidence that the thalamus—the brain’s relay system—was hyperconnected. We might interpret this as the thalamus trying to over-compensate for any anticipated damage, and this appears to be at the root of some of the long-lasting symptoms that patients experience.”

By studying additional data from positron emission tomography (PET) scans, which can measure regional chemical composition of body tissues, the researchers were able to make associations with key neurotransmitters depending on which long-term symptoms a patient displayed.

For example, patients experiencing cognitive problems such as memory difficulties showed increased connectivity between the thalamus and areas of the brain rich in the neurotransmitter noradrenaline; patients experiencing emotional symptoms, such as depression or irritability, showed greater connectivity with areas of the brain rich in serotonin.

Dr. Stamatakis, who is also Stephen Erskine Fellow at Queens’ College, Cambridge, added, "We know that there already drugs that target these brain chemicals so our findings offer hope that in future, not only might we be able to predict a patient’s prognosis, but we may also be able to offer a treatment targeting their particular symptoms.”

The Brain Injury Alliance of Oregon can deliver a range of trainings for your organization. These include:

- CBIS Training (Certified Brain Injury Specialist)-International Certification/Brain Injury Fundamentals Certification
- What Medical Professionals Should Know About Brain Injuries—But Most Don’t
- Challenging Behaviors
- TBI & PTSD in the Returning Military
- Vocational Rehabilitation-working with clients
- Methamphetamine and Brain Injury
- ADA Awareness—Cross Disability Training
- Judicial and Police: Working with People with Brain Injury
- Traumatic Brain Injury: A Guide for Educators
- Native People and Brain Injury
- Brain Injury 101
- Trauma Informed Care
- What the Family Needs to Know After a Brain Injury
- Anger Management and TBI
- Aging and TBI
- How Brain Injury Affects Families
- Brain Injury for Medical and Legal Professionals-
- What you need to know
- Caregiver Training
- Domestic Violence and TBI
- Dealing with Behavioral Issues
- Returning to Work After Brain Injury
- And more!

You Have a Right to Justice
Research Opportunity: Have you had a brain injury & have ongoing attention and memory challenges?

We are looking for individuals in Oregon, California or Virginia to participate in a research study evaluating the best way to administer a series of attention/memory training drills and train in the use of phone apps to support cognitive challenges.

**Eligibility Criteria**
- Individuals who sustained an acquired brain injury
- Injury occurred at least one year ago
- Individuals 21 and older
- Moderate to severe attention/memory challenges
- No language deficits (aphasia)
- Ability to follow auditory & visual instructions
- Ability to participate in Zoom sessions
- Access to a smartphone

**Participation Involves**
- Participation in a series of cognitive rehabilitative treatment sessions
- Sessions will be conducted over Zoom
- Estimated to occur over 30 days

**Potential Benefits**
- Developing a better understanding of your cognitive skills & potential performance improvements

Participants who complete the entire study will receive a $200 gift card

**IF INTERESTED, FOR MORE INFORMATION CONTACT:**
Claire Rondeau | crondeau@uoregon.edu

University of Oregon | Communication Disorders and Sciences
New ACBIS Program Announcement: Brain Injury Fundamentals

When someone sustains a brain injury, it’s not just the life of the individual that is affected, but the lives of family, friends, and people in the community. As part of its mission to provide education that improves the lives of individuals with brain injury, the Academy of Certified Brain Injury Specialists (ACBIS) has targeted the widest possible audience with information that can be used in everyday life.

The course is grounded in adult learning principles, maximizing participant engagement and application through an interactive workbook. Using the stories of two individuals to anchor the course concepts, participants learn about the challenges people face following brain injury and how they are supported. Course content covers: Overview of brain injury and cognition; developing effective interaction skills and addressing behavioral concerns; common physical and medical issues following brain injury; best practices for medication management; and impact of brain injury on the family. An online post-test is provided in open-book format, earning participants a certificate of completion that can be printed.

Developed by experienced clinicians and rehabilitation professionals, Brain Injury Fundamentals is an all-new training and certificate program designed to address the unique needs and challenges of those who care for or encounter individuals with brain injury. This includes non-licensed direct care staff persons, facility staff, family members and friends, first responders, and others in the community. The mandatory training course covers essential topics such as:

- Cognition
- Guidelines for interacting and building rapport
- Medical complications
- Safe medication management
- Brain injury and behavior
- Families coping with brain injury

The course is grounded in adult learning principles, maximizing participant engagement and application through an interactive workbook. Using real-life scenarios and interactive simulations to anchor the course concepts, participants learn about the challenges people face following brain injury and the types of support they need. This essential program will help candidates understand different types of behavior, manage medication safely, and provide support to families and friends.

The Brain Injury Fundamentals course is comprehensive and flexible enough to be incorporated as an organization’s on-boarding program for direct care staff, or used as a stand-alone training in healthcare and community facilities. The course will be taught by ACBIS trainer, Sherry Stock, ABD/PhD, CBIST, who has more than 20 years’ experience in the field.

After completing intensive training, candidates will receive a certificate that is valid for three years. To learn more about the application process contact Sherry Stock at BIAOR sherry@biaoregon.org. 800-544-5243 or 503-740-3155

Training: Training is required in order to receive the Brain Injury Fundamentals certificate. Trainings will take approximately 8 hours. Instructor is Sherry Stock, CBIST sherry@biaoregon.org 800-544-5243 or 503-740-355

Costs & Fees: Fundamentals Application (including Practical Training Workbook), training and exam: $250*

*Fundamentals Application fees are non-refundable. Additional Costs of Trainings may apply for trainer outside the greater Portland area may apply covering per diem and travel costs.
Fighting for David
Leone Nunley was told by doctors that her son David was in a “persistent coma and vegetative state”--the same diagnosis faced by Terri Schiavo's family. Fighting for David is the story of how Leone fought for David's life after a terrible motorcycle crash. This story shows how David overcame many of his disabilities with the help of his family. $20

The Caregiver’s Tale: The True Story Of A Woman, Her Husband Who Fell Off The Roof, And Traumatic Brain Injury
From the Spousal Caregiver’s, Marie Therese Gass, point of view, this is the story of the first seven years after severe Traumatic Brain Injury, as well as essays concerning the complex emotions and changing dynamics of her family and their expectations. More than a personal story, the book contains a collection of articles written by Carolyn Rocchio as a national columnist for newsletters and journals on brain injury. $25

Recovering from Mild Traumatic Brain Injury A handbook of hope for military and their families. Edited by Mary Ann Keatley, PhD and Laura L. Whittemore
This clear and concise handbook speaks to our Wounded Warriors and their families and helps them navigate through the unknown territory of this often misunderstood and unidentified injury. It provides an insightful guide to understanding the symptoms, treatment options and redefines "Recovery" as their new assignment. Most importantly, the intention of the authors is to inspire hope that they will get better, they will learn to compensate and discover their own resiliency and resourcefulness. $23.00

Understanding Mild Traumatic Brain Injury (MTBI): An Insightful Guide to Symptoms, Treatment and Redefining Recovery
Understanding Mild Traumatic Brain Injury (MTBI): An Insightful Guide to Symptoms, Treatment and Redefining Recovery Edited by Mary Ann Keatley, PhD and Laura L. Whittemore $23.00

Ketchup on the Baseboard
Ketchup on the Baseboard tells the personal story of the authors' family's journey after her son, Tim, sustained a brain injury. Chronicling his progress over more than 20 years, she describes the many stages of his recovery along with the complex emotions and changing dynamics of her family and their expectations. More than a personal story, the book contains a collection of articles written by Carolyn Rocchio as a national columnist for newsletters and journals on brain injury. $25

A Change of Mind
A Change of Mind by Janelle Breese Biagioni is a very personal view of marriage and parenting by a wife with two young children as she was thrust into the complex and confusing world of brain injury. Gerry Breese, a husband, father and constable in the Royal Canadian Mounted Police was injured in a motorcycle crash while on duty. Janelle traces the roller coaster of emotions, during her husband’s hospital stay and return home. She takes you into their home as they struggle to rebuild their relationship and life at home. $20

Thank you to all our contributors and advertisers.

Vehicle Donations

Through a partnership with VDAC (Vehicle Donations to Any Charity), The Brain Injury Alliance of Oregon, BIAOR, is now a part of a vehicle donation system. BIAOR can accept vehicles from anywhere in the country. VDAC will handle the towing, issue a charitable receipt to you, auction the vehicle, handle the transfer of title, etc. Donations can be accepted online, or call 1-866-332-1778. The online web site is http://www.v-dac.com/org/?id=930900797
